Automatic Audio Crew Observations:

-----MADE A SCULPTURE OF ME BUT MY DICK WAS TOO THIN-----
SHIT! Officers deck Audio music OFF!!!

HMS Freedom currently data anchored 210 miles north off exclusion area of Pitcairn Islands. The un-seasonally warm waters are causing slight overheating in bays 2145 - 5521. I asked EMMA to double server observations for the remainder of the anchorage to preserve coolant. Requesting EMMA to prioritise temperature balance. EMMA is unusually quiet, spending time in other sectors of the ship rather than officers quarters. We have chosen the the mediterranean display on the bridge environment visibility enhancer which seems to have cheered the crew and improved their Moral by 8%.

Out.

Pshhh - ASCO Pshhh - WING KELPS - Pshhh- SEA WHISTLE - Pshhh- BROWN FORKING WEED

Arghhhhhhhh..... WOW!!!! Fuck!!!

(46 seconds no audio)

We..... we were just blinded by a flash! A flash in the bridge, then a grating sound of metal being peeled.

The light penetrated the environment enhancer!!!! bridge retina display is burnt.

Darkness, fog, smell of sea coolant and burnt marine flesh throughout the crew quarters.

No communication with EMMA or Marco Polo DATA barge.

Incoming Satellite communications ONLY.

EMMA will not respond or communicate with centre, awaiting EMMA to issue distress signal and distress procedures.

NO 'sailors' aboard crew, land technicians only.

Watching news 28 no reports of any data barge in distress.

Automatic Audio Crew Observations:

LAND!!!! LAND IN SIGHT!!!! LAAAAAND!!!!

Adrift for Thirty Seven days..... We saw land this morning after a break in the fog. We must have drifted over 100 as we awoke this morning to see all ten submarine communications cable severed, also our anchorage station has detached.

Managed to break out of the bridge and crew accommodation section to the 'lights out server hold', tried to locate EMMA to begin arrangements to reach LAND!

CREW unable to make distress flag, searching servers for 'ship in Distress' information, but data is incomplete.....

EMMA is pissed that we have breached company policy and accessed 'lights out server hold', she has diverted all power to servers!

LAND IN SIGHT!!!! LAND IN SIGHT!!!! LAND IN SIGHT!!!!

Automatic Audio Crew Observations:

One YEAR. One YEAR. One YEAR. One YEAR. One YEAR. One YEAR. One YEAR.

One YEAR since disconnection and One YEAR of the island.

We have used the kevlar insulating material from the servers to make a hundred of distress flags which we have spread about the Island.

EMMA will not or is unable to terminate server power.

The data has become trapped in a loop, EMMA won't allow heat to disperse!!!!

Crew Quarters are unlivable due to temperature, yet crew still inhabiting quarters.

The hull of the ship glows white with heat and the sand that gathered around the ship when we beached has melted into glass.
